INDEPENDENT PRODUCT MANAGEMENT CASE

Netflix After Hours

Evidence aligned late night viewing concept and deployment ready interactive prototype

Final release · November 2026

Not affiliated with, endorsed by, or produced for Netflix

Executive decision

The case is complete. A positive financial case remains unproven.

Proceed only as a small, instrumented learning pilot if an authorized organization sponsors further validation.

Decision area	Final position
Viewer need	Directionally supported by independent secondary evidence
Pilot experience	Manual timer, cancellable stop, local checkpoint, and resume choice
Customer validation	Not completed
Economic result	Positive case not demonstrated
Portfolio outcome	Completed independent concept to decision case

Evidence changed the scope

The original suite exceeded the available evidence, so the pilot became smaller and user controlled.

Original assumption	Evidence decision
Wearables infer sleep reliably	Deferred to a separate feasibility track
Advanced audio improves sleep	Removed with all therapeutic claims
Premium prompts create conversion	Removed from pilot; contribution held at zero
Unattended playback creates savings	Retained only as a measurable operational hypothesis
One late night window fits everyone	Replaced with user initiated controls

Research outcome

Secondary evidence established context and interaction precedent. It did not validate product specific outcomes.

Baseline	Disposition	Product implication
Bedtime viewing context	Supported	Continue problem track
Manual timer pattern	Supported	Use a familiar interaction
Problem frequency	Unresolved	Do not claim incidence
Recovery value	Unresolved	Test correction and desirability
Retention or conversion	Unsupported	Hold contribution at zero
Delivery savings	Unresolved	Require internal marginal value

05

Pilot experience

One release promise connects timer setup, a controlled stop, and transparent recovery.

01

Set timer

15, 30, 45 minutes, or episode end

02

Stop gently

Dim, show countdown, cancel on input

03

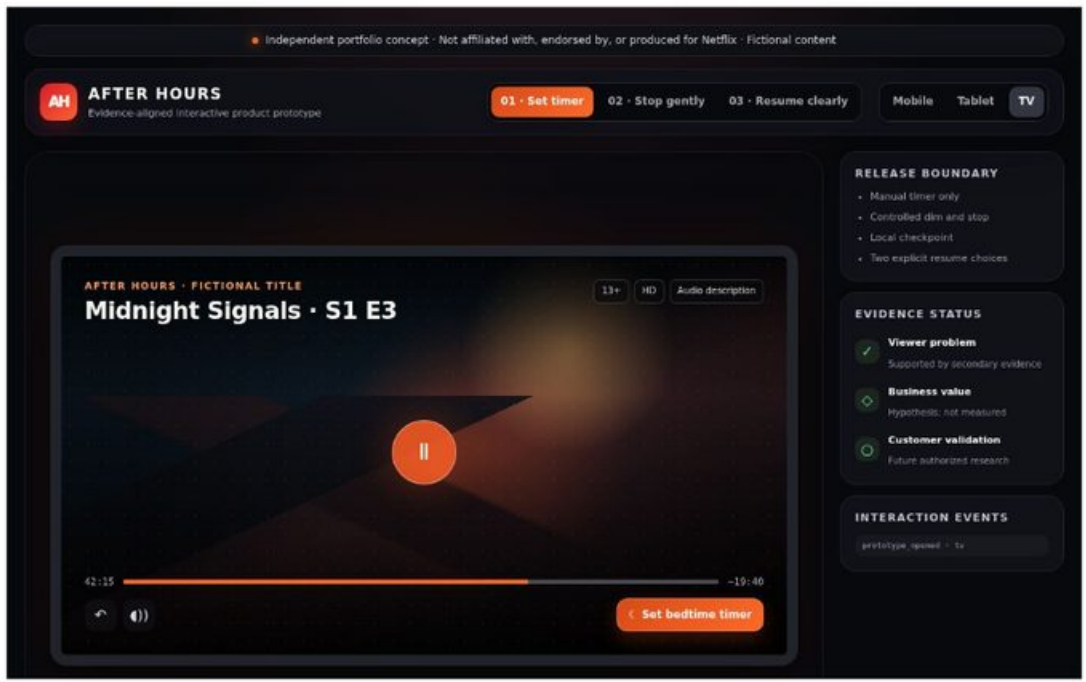

Resume clearly

Choose checkpoint or latest position

Release boundary Manual controls, local state, no wearable or commercial claim

Deployment ready prototype

The self contained release runs without external scripts, fonts, images, APIs, analytics, or storage calls.

Verified journeys

Timer selection

Cancellable stop

Local checkpoint resume

TV and mobile layouts

Keyboard and dialog states

Sandbox deployed
Repository host ready

Measurement framework

Targets guide decisions. They do not represent measured results.

Question	Primary measure	Decision use
Do viewers activate it?	Activation rate	Desirability
Does the timer complete?	Controlled stop completion	Core value
Is the stop unwanted?	Cancel and immediate restart	Trust guardrail
Does recovery help?	Checkpoint choice and correction	Resume value
Does behaviour change?	Avoided continuation minutes	Operational input
Does retention change?	Experiment retention delta	Future evidence only

Gate 4 conclusion

The model can calculate stream hours under assumptions. Missing internal inputs prevent a positive financial conclusion.

Value pathway	Conservative treatment	Reason
Retention	Zero	No causal evidence
Premium conversion	Zero	No observed conversion
Avoided stream hours	Computable	Requires behavioural assumptions
Marginal delivery value	Unavailable	Not public evidence
Build and operating cost	Unavailable	Requires authorized estimates

Gate 4 closed as not demonstrated, rather than failed.

Approval closes the evidence review. It does not approve an investment case.

Future evidence roadmap

Each stage must produce the evidence needed for the next decision.

1	**Authorized discovery**	Frequency, severity, desirability
2	**Usability pilot**	Task success and correction
3	**Instrumented experiment**	Activation, completion, avoided minutes
4	**Economic review**	Marginal value and build and run costs
5	**Feasibility tracks**	Privacy, sync, certification, reliability

Final portfolio position

A complete concept to decision case with a bounded pilot and an honest investment conclusion.

Viewer problem

Credible context

Pilot

Bounded and deployable

Economics

Not demonstrated

The original concept remains archived for traceability. The active release reflects the evidence.
