NETFLIX AFTER HOURS

PATH C: EXECUTION BACKLOG & SHIFT-LEFT GOVERNANCE (UPDATED)

Document Version: 2.0-FINAL
Includes Edge-Case Tickets

1. EPIC 1: CORE PLAYER UI CONTROLS & MULTI-VIEWER OVERRIDES

NAH-101 Low-Luminescence Moon Icon & Timer Overlay — Type: Story | Priority: High | **5 SP**

User Story: Dedicated moon icon opening low-luminescence modal with circadian amber rings (#FF4500) and 56x56dp touch targets.

NAH-102 Multi-Viewer Living Room Override & Controller Intercept — Type: Story | Priority: High | **5 SP**

User Story: As an awake co-viewer watching TV, I want a visible 5-second override banner on screen so that I can immediately stop the sleep fade without disturbing my viewing.

```
Scenario: Co-Viewer Cancels Automatic Sleep Fade Given a sleep decay sequence initiates on a 65" TV living room session When the T-10m dimming or wearable trigger initiates Then a non-intrusive banner displays: "Sleeping detected. Press any button or tap 'Keep Playing' to cancel." And receiving any DPAD input within 5s halts decay and restores 100% luminance/volume.
```

2. EPIC 2: CLIENT-SIDE AUDIO DSP, OLED DIMMING & HARDWARE FALLBACKS

NAH-201 10-Minute Exponential Display Dimming Curve — Type: Story | Priority: High | **8 SP**

Acceptance Criteria: Exponential display brightness decay `L(t) = L_initial * (1 - t/600)^2` down to #000000 true black at T-0m.

NAH-202 5-Minute Low-Pass Audio Filter & Volume Decay — Type: Tech Story | Priority: High | **13 SP**

Acceptance Criteria: 2nd-order Butterworth low-pass filter (20kHz down to 1.8kHz) with DRC dynamic range compression to -48 dBFS.

NAH-203 Smart TV Device Capability Handshake & Audio Fallback — Type: Tech Story | Priority: High | **8 SP**

User Story: Legacy Smart TVs (Tizen 2020 / webOS 5.0) benchmark DSP latency at startup. If latency > 25ms, client gracefully disables DSP filter nodes and uses simple volume attenuation to prevent audio crackling.

NETFLIX AFTER HOURS

PATH C: EPICS 3-4, SHIFT-LEFT GOVERNANCE & ROADMAP

Document Version: 2.0-FINAL
Release Management Plan

3. EPIC 3 & 4: WEARABLES, PRIVACY METADATA & SHIFT-WORKER RULES

NAH-302 Apple HealthKit Privacy Compliance Metadata — Type: Compliance | Priority: High | **3 SP**

Acceptance Criteria: `NSHealthShareUsageDescription` in Info.plist verifies: *"Netflix uses local sleep stage telemetry exclusively on-device to gently fade screen/audio. Zero raw data is stored or transmitted."* Passes App Store review audit.

NAH-402 LaunchDarkly Flags & Shift-Worker Schedule Overrides — Type: Tech Story | Priority: Critical | **5 SP**

Acceptance Criteria: Flag schema supports custom user context payload (`user.custom_bedtime_start`) to enable sleep prompts during daytime hours for shift workers and travelers.

4. SHIFT-LEFT QUALITY & GOVERNANCE INTEGRATION

Shift-Left Quality Pillars:

- **Multi-User Intercept Automation:** BDD tests simulate living room DPAD keypresses during active fades to verify instant restoration without stream drop.
- **Hardware Benchmark Gate:** Automated CI runs verify legacy TV capability fallbacks (Tizen/webOS) to protect frame rates (>60fps) and audio buffers.
- **Health Privacy Audit Gate:** Automated SAST code scanners block PR merges if raw health telemetry metrics leave local client edge memory.

5. UPDATED 4-SPRINT EXECUTION SCHEDULE

Sprint	Core Focus	Tickets Included	Milestone Deliverable
Sprint 1	Foundation UI & Flags	NAH-101, NAH-102, NAH-402	Timer modal, multi-viewer cancel banner, LaunchDarkly shift-worker rules.
Sprint 2	DSP, Dim & Hardware Fallback	NAH-201, NAH-202, NAH-203	10m dimming, 5m audio decay, Smart TV device capability handshake fallback.
Sprint 3	Offline & Sleep Recovery	NAH-401	SQLite CRDT storage, cloud sync worker, and morning Home recovery hero card.
Sprint 4	Wearables & Canary Release	NAH-301, NAH-302	HealthKit/Oura sync, App Store privacy audit strings, 5% canary rollout.
